

*AMENDMENTS TO THE SPECIFICATION*

Replace the paragraph at page 12, lines 10-18, with:

The effectiveness of the invention can be demonstrated in the following example of detection of schizophrenia. A small sample of 56 patients ~~were~~ was tested. The patients comprised three groups: 31 with clinically diagnosed schizophrenia; 16 patients with clinically diagnosed mania; and 9 control subjects. Speech samples were collected from each patient using a structured narrative task. A typical block of narrative text from a patient in the schizophrenia group is shown in FIG 5a 5b with a corresponding control in FIG 5b 5a. Another block of control text is shown in FIG 6a 6b with text from a patient in the mania group in FIG 6b 6a.
